Project Co-Chair

W.P.S. Sidhu
Project Co-Chair

OBOR - NOTABLE PUBLICATIONS OF THE LAST QUARTER

The **15-month** Brookings Institution project focused on the “**strategic chain**” linking **Pakistan, India, China, and the United States**—a series of relationships that are resulting in some of the most active nuclear weapons, missile, and missile defense programs anywhere in the world today. The project’s **main goal** was *to identify policies and measures that could promote stability and reduce incentives for arms build-ups between key pairs of protagonists, regionally, and globally, while also contributing to a better understanding of the various strategic interconnections among these four nuclear-armed powers.*

The study was based on research conducted by Brookings and foreign experts and drew on the results of consultations with former senior officials and scholars from each of the four countries in the strategic chain.
